

Annular Solar Eclipse (May 2012)

Peacock Myers is delighted to enclose Eclipse Glasses for viewing the solar eclipse on May 20, 2012. These solar viewing glasses are CE certified for solar eclipse viewing, with an optical density of 5 or greater.

This annular solar eclipse will take place on May 20, 2012, with the maximum coverage occurring in New Mexico just after 7:30 p.m. Mountain Time. It will be the first annular eclipse in North America since the solar eclipse of May 10, 1994. An annular eclipse occurs when the moon covers most of the sun's disk leaving a thin ring of light around the edge appearing as a "ring of fire."

New Mexico is a prime viewing region for this astronomical event and we want our clients to safely enjoy the eclipse.
