Peacock Law's Outer Space Practice Group

As our firm's President, Deborah Peacock, returns from the Space Foundation's 37th Annual Space Symposium in Colorado Springs, it is a perfect time to boast about Peacock Law's involvement in the growing Outer Space industry. The Space industry is no longer monopolized by governments, but is the hot spot for numerous private entrepreneurial ventures. Peacock Law was there at the beginning, obtaining patents for famous pioneers, helping to establish Spaceport America, and is now more active than ever.

Our attorneys mentor at top Space technology incubators, including the Creative Destruction Lab Space Stream, and sit on advisory committees for Outer Space investment funds. The Group's attorneys have diverse technology backgrounds to assist with most, if not all, technologies that may arise. Most recently, the Group has been busy assisting with intellectual property for propulsion systems, fuel manufacturing and storage technologies, communications systems, satellite imaging and image processing, space ships and space suits, lunar rovers, mineral extraction and processing in space and on the moon/asteroids, and even new uses for orbits. The Group drafts and negotiates its Space clients' key agreements, including master services and supply agreements, terms of sale, technology license agreements, confidentiality agreements, employment/contractor agreements, term sheets, and exit agreements. We are a one-stop shop for all intellectual property and agreement needs.

What were Deborah Peacock's take aways from the Annual Space Symposium this year? Most outer space companies have an exit through acquisition, and the average is seven years to exit – it's a myth that investing in outer space companies will take decades for a return. And, we are reminded that Jeff Bezos (Blue Origin/Amazon) started his business in a garage, as have many other great entrepreneurs.

Learn more about our Outer Space Practice Group at our website, which includes videos and our attorneys' bios, at: <https://peacocklaw.com/aerospace/>

Let us know about any Space conferences you are going to and maybe we will meet you there!
